

An introduction to

Timekeeper Connect™

Delivering a full featured & reliable link
between Dynamics HR & third party Timekeeping
systems

Microsoft
Dynamics 365

Microsoft
Dynamics GP

Timekeeper Connect™ integrates employee data changes from Dynamics HR to third party Timekeeping systems. Dynamics HR remains the system of record, empowering customer-owned integrations.

Timekeeper Connect™ takes data from your Dynamics HR system & creates “people records” for systems like UKG & Replicon. It serves as a single source for maintaining employee data selections that populate all time capture, leave, & scheduler solutions — covering pay rates, union info, & more.

Timekeeper Connect™ automatically translates & reformats employee data changes to the requirements used in many major Timekeeping solutions. This integration ensures that Dynamics HR remains the system of the record.

Supports Cloud Based
Environments

Highly Customizable

Easy to Maintain

Run Ad-Hoc or Scheduled

Why Timekeeper Connect™?

Timekeeper Connect™ sends employee data changes from Microsoft Dynamics to Third Party Time Capture solutions (UKG Central, Dimensions, & Ready)

Reduces/Eliminates Duplicate Entries of Employee Data

When an employee has a change affecting the Timekeeping rules, such as Department, Rate, Shift, Work Schedule, the integration updates the system according to the translation table, which improves data integrity.

Supports Timely Punching

The auto-scheduler allows HR to update the Timekeeping system as needed (Daily, Weekly, Per Payroll Cycle) or ad-hoc. New Hire data is processed in time for their first work shift.

Side by Side Comparisons

Change Report archives key data changes, showing prior values from Dynamics HR and what the new values will be in the 3rd Party Timekeeping system.

A Data Integration Solution Unlike Any Other

With the power & flexibility to support your timekeeping system, Timekeeper Connect™ strikes the ideal balance between cost, effectiveness & functionality – avoiding the risk & expense of an incomplete solution or custom-built integration
